

Sistemas Eléctricos de Potencia

Primavera 2012, Auxiliar 2

Parámetros

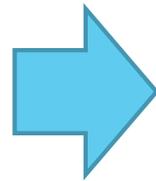

- ▶ Capacitancia $C = \frac{2\pi\epsilon_0}{\ln\left(\frac{DMG}{r_c}\right)} \left[\frac{F}{m}\right]$
- ▶ Inductancia $L = 2 \cdot 10^{-7} \ln\left(\frac{DMG}{r_c}\right) \left[\frac{H}{m}\right]$

Modelo de línea de transmisión

$$\frac{\partial V(x,t)}{\partial x} + R'I(x,t) + L'\frac{\partial I(x,t)}{\partial t} = 0$$

$$\frac{\partial I(x,t)}{\partial x} + G'V(x,t) + C'\frac{\partial V(x,t)}{\partial t} = 0$$

$$\frac{\partial \dot{V}}{\partial x} + \underbrace{(R' + j\omega L')}_{\dot{Z}'} \dot{I} = 0$$

$$\frac{\partial \dot{I}}{\partial x} + \underbrace{(G' + j\omega C')}_{\dot{Y}'} \dot{V} = 0$$

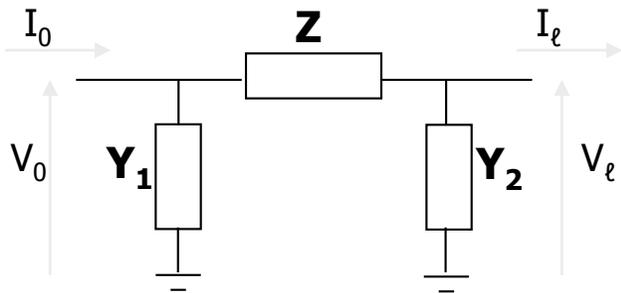

Parámetros ABCD

$$\begin{bmatrix} \dot{V}(0) \\ \dot{I}(0) \end{bmatrix} = \begin{bmatrix} \cosh \gamma l & \dot{Z}_c \sinh \gamma l \\ \dot{Y}_c \sinh \gamma l & \cosh \gamma l \end{bmatrix} \begin{bmatrix} \dot{V}(l) \\ \dot{I}(l) \end{bmatrix}$$

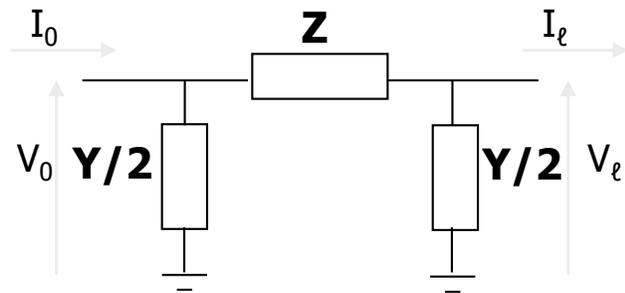

$$\gamma = \sqrt{(R' + j\omega L')(G' + j\omega C')}$$

$$\gamma = \alpha + j\beta$$

Modelo pi

$$\begin{aligned} A &= 1 + Y_2 Z \\ B &= Z \\ C &= Y_1 + Y_2 + Z Y_1 Y_2 \\ D &= 1 + Y_1 Z \end{aligned}$$

$$\begin{aligned} A &= 1 + ZY/2 \\ B &= Z \\ C &= Y(1 + ZY/4) \\ D &= A \end{aligned}$$

Aproximación línea corta

$$\dot{Z} = \dot{Z}_c \sinh \gamma l \approx \sqrt{\frac{Z'}{Y'}} \cdot \sqrt{Z'Y'} l = Z' l = (R' + j\omega L') l$$

$$\frac{\dot{Y}}{2} = \frac{1}{\dot{Z}_c} \tanh \frac{\gamma l}{2} \approx \frac{\sqrt{Y'}}{\sqrt{Z'}} \cdot \frac{\sqrt{Z'Y'}}{2} = \frac{Y'}{2} = \frac{(G' + j\omega C')}{2} l$$

Carta operación

$$\left(P_r + \frac{V_r^2 A}{B} \cos(\beta - \alpha) \right)^2 + \left(Q_r + \frac{V_r^2 A}{B} \sin(\beta - \alpha) \right)^2 = \left(\frac{V_r V_t}{B} \right)^2$$
